KPI & Incentive Program — Guide

How performance is measured and rewarded across Customer Feedback, Production, Quality Control and Outsourcing.

1. What this program does

The KPI & Incentive Center turns the work your team already records into a fair, transparent score for each employee, an accumulated points balance, and a calculated bonus. It covers people who handle customer feedback cases and people who work in production, and it ties product quality back to the person responsible.

Everything is computed from data already in the system - resolved cases, completed production steps, time sessions, quality controls, complaints and outsourced orders. Nothing has to be entered twice.

2. The core idea: Points -> Bonus

- Each employee accumulates POINTS for good output (aligners produced, steps completed, QC passed, cases resolved on time, high efficiency).
- PENALTIES subtract points for problems traced to them (complaints, QC failures, reopened cases, overdue follow-ups).
- NET POINTS = earned points - penalty points.
- BONUS = net points x the configured point-value (a currency amount you set, e.g. 0.50 per point), with an optional cap.
- A SCORE out of 100 ranks everyone, and a TIER (Gold / Silver / Bronze) is assigned by score thresholds.

3. Production employees - how points are earned

Productivity and efficiency are measured from production tracking and time sessions:

- Aligners produced - points per aligner.
- Production steps completed (Printing, Thermoforming, Line Cut, Laser Marking, Cleaning, Packaging) - points per step.
- Efficiency % = productive minutes / (productive + waste + break minutes). Points are earned for efficiency above a floor you set (e.g. above 60%).
- Average cycle time per step is shown to spot bottlenecks.
- QC passes performed - points per approved quality control.

4. Case handlers - customer feedback

People who resolve customer feedback cases earn points for resolution and speed:

- Points per case resolved.
- Extra points when a case is resolved within the SLA target (e.g. within 3 days).
- Penalty for overdue follow-ups assigned to them.

5. Quality tied back to the person

A complaint is traced back to the operator who performed the production step responsible for that complaint category. For example, a 'Packaging' complaint is attributed to whoever did the Packaging step on that order; a 'Fitting' complaint to the Printing/Thermoforming operator. This attribution map is fully editable.

- Each traced complaint applies a penalty to the responsible operator.
- QC failures and reopened cases also apply penalties.

This closes the loop: the people whose work generates complaints see it reflected in their score, and the categories driving complaints become visible.

6. The QC-before-delivery gate

Quality is enforced, not just measured. A case cannot be marked fully completed / ready for delivery unless its Quality Control is APPROVED - covering aligner quality, treatment-plan match, packaging and shipping/documentation.

- Enforced in the database, so it cannot be bypassed.
- Production shows a clear message if QC is missing, before anything is saved.
- A one-click admin kill-switch can disable the gate instantly in an emergency.

7. Outsourcing

Outsourced orders are tracked per supplier: number of orders, aligners, on-time return rate (returned on or before the expected date) and cost - so supplier performance is comparable at a glance.

8. Everything is parametrable

Open the configuration panel on the KPI & Incentives page to change, and save, any of the following. Changes persist for all admins and recompute immediately:

- Bonus value (currency per point) and an optional bonus cap.
- Points per aligner, per step, per QC pass, per case resolved, per SLA case.
- Efficiency floor % and points per efficiency point.
- Penalties: per complaint, per QC fail, per reopen, per overdue follow-up.
- SLA days and the tier thresholds (Gold / Silver / Bronze).
- The QC-before-delivery gate on/off.
- The complaint-category -> production-step attribution map.

9. Access & exports

- The report page is restricted to managers / admins / super admins.
- Filter by period (This month / Quarter / Year / All).
- Export to CSV, or print / save as PDF directly from the page.

10. A worked example

An operator produced 40 aligners (40 pts), completed 12 steps (6 pts at 0.5 each), passed 3 QC checks (12 pts), ran at 78% efficiency (above a 60% floor -> 7.2 pts). Earned = 65.2. One packaging complaint was traced to them (-10) and one QC fail (-8). Net = 47.2 points. At 0.50 per point, the bonus = 23.60. Their tier follows their score relative to the team.

All figures above are illustrative; the actual values come from your configured settings.

Cedarwings SAS - KPI & Incentive Program. This guide reflects the program as configured in the application; live values always follow the settings saved on the KPI & Incentives page.
